

Adithyah Nair

MS Computer Science,

New York University, Brooklyn, September 2024 – May 2026 (GPA: 3.75)

Bachelor of Technology in Computer Science and Engineering

SRM University AP, India, September 2020 – June 2024 (GPA: 3.54)

<https://www.linkedin.com/in/adityahnair/>

New York, NY 10012

Technical Proficiencies

Languages: C++, Python, TypeScript, JavaScript, Swift

Technologies/Frameworks: Git, CI/CD, GCP, MERN, MCP, Claude Code, MongoDB, AWS, NodeJS/React, Notion/Attio, PostHog

Experience

RomanCoPilot AI | Founding Fellow/Engineer – New York, NY

July 2026 - Ongoing

- Built an AI-powered revenue optimization platform for the med spa industry. Designed and engineered a deterministic task-revenue uncovering logic. Integrated third-party data sources to optimize revenue uncovered for the client. Interacted with client, understood their demands, and delivered the finished product on time.
- Worked towards being HIPAA compliance and handling PHI values. Orchestrated a RAG system for intuitive usage of the product. Uncovered up to \$800,000 in hidden revenue with latest client.

Block Convey | Software Engineer Intern – New York, NY

May 2025 – August 2025

- Architected and deployed PRISM on Google Cloud Platform (GCP), designing a secure, auto scaled, event-driven system using Cloud Run, Cloud Functions, and Terraform IaC to support scalable AI model governance and audit for ML testing and LLM services across multi-tenant and single-tenant environments.
- Developed automated AI analysis pipelines with Cloud Build for ML testing (bias detection, drift analysis, explainability, benchmarking) and LLM evaluation with guardrails for security against bias, PII exposure, prompt injection, and adversarial red-teaming, triggered by storage events; implemented statistical tests for model benchmarking under scenarios like dataset noise induction and Furthermore, the platform rigorously checks model compliance against evolving global standards, including the Colorado SB 21-169, the EU AI Act, ISO 42001, NIST (AI RMF), and NYC Local Law No. 144.

Jumping Minds | Lead iOS Application Developer – Remote, India

July 2022 – August 2022

- Spearheaded end-to-end development as the sole iOS developer, delivering a production-ready application within 6 weeks using Swift, Xcode, and UIKit that achieved 98% feature parity with the Android version and reduced cross-platform development time by 35%.
- Architected and implemented a secure multi-factor verification system with 99.9% reliability using Core Data, KeychainAccess, and JWT authentication, while integrating RESTful and GraphQL APIs that processed 10,000+ daily transactions with 30ms average response time.
- Engineered responsive UI/UX design utilizing Auto Layout, UIStackView, and custom animations that achieved 100% compatibility across all iOS devices, resulting in a 4.7/5 rating in internal QA testing and reducing UI-related bug reports by 80% compared to previous projects.

Personal Projects

NFL-Realtime-Analytics – (AWS, Python, NFL API, Kinesis, ML Classification) – Big Data Final Project

- Co-developed a real-time NFL analytics platform that ingested and processed live play-by-play and tracking data to generate low-latency game insights and visualizations. Built scalable data pipelines and analytics workflows using Python, Pandas, Jupyter, and NFL data APIs/packages, processing thousands of game events and player tracking records to support statistical modeling, performance analysis, and interactive dashboards for live game monitoring.

CodeGuardian – (Python, TypeScript, Java, C++, LMStudio, Local AI, yi-coder-9b-chat) – On-Device AI Builders Hackathon 2024

- Co-developed an AI-powered VS Code extension using local LLMs via LMStudio that performs real-time vulnerability detection across 8+ programming languages (Python, JavaScript, TypeScript, Java, C++, Ruby, Go, PHP), identifying critical security issues including path traversal, SQL injection, XSS vulnerabilities, and API security flaws with 92% accuracy while maintaining complete data privacy through secure local analysis.

MemeVerse – (TypeScript, Go, Solidity, Shell, JavaScript, CSS, HTML) – Avalanche x MBC Hackathon 2024 (**Winner**)

- Co-developed a meme coin launchpad on custom Avalanche L1 subnet featuring 4 core innovations: bonding curve tokenomics with 5-step dynamic pricing, automated liquidity pool creation with 100% finality guarantees, cross-chain notifications via ITeleporterMessenger, and real-time token analytics dashboard processing 1,000+ transactions during testing, culminating in 2nd place recognition and 23+ successful deployments.

Research/Patent

COMSNETS Graduate Forum 2024 | Published & Presented – Bengaluru, IN | Published Patent (**202441045762 A**: Indian Patent Office)
